Note the following **WARNINGS** and **CAUTIONS** when using Electric / Electronic Measuring Instruments.

1 Safety Symbols

Caution Symbol on the instrument indicates that the user should read carefully the operating instructions in the manual.

High Voltage Warning Symbol on the instrument indicates that a potential of 1000V or more high voltage may be present on the Terminals. The user should use extreme care about safety practices.

Maximum Allowable Ground Voltage Symbol on the instrument indicates that the maximum voltage between INPUT Terminals and Earth Ground is 500V in this case. The user must not apply any voltage that will exceed the maximum voltage.

2 Warnings for High Power Line and High Voltage Measurements

The ordinary multimeters, analog or digital, are provided with maximum range of 500V to 1000V AC and DC. But, most of them are designed to measure Low Power Circuits such as TVs, Radios and home electrical apparatus.

Therefore, to measure High Power Circuits or High Power Line more than 220V, such as Power Supplies for Factory Equipments and Facilities, etc., do NOT use any ordinary multimeters. Use the instruments especially designed for High Power Line.

High Power Line sometimes includes Surge Voltage more than 10 times of the rated voltage. So, the Surge Voltage will cause electric shock accidents when measuring with the ordinary multimeters. Even if the circuit to be measured is of Low Power, if the voltage is greater than 220V, use the instruments with great care observing warnings and cautions written in the instruction manuals concerned.

For Safety

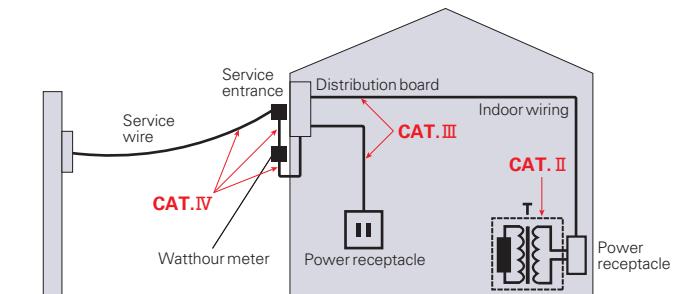

The International Safety Standard IEC61010

To ensure safe operation of measurement products, IEC 61010 establishes safety standards for various electrical environments, categorized as CAT II to CAT IV, and called measurement categories. These are defined as follows.

CAT. II Primary electrical circuits in equipment connected to an AC electrical outlet by a power cord (portable tools, household appliances, etc)

CAT. III Primary electrical circuits of heavy equipment (fixed installations) connected directly to the distribution panel, and feeders from the distribution panel to outlets.

CAT. IV The circuit from the service drop to the service entrance, and to the power meter and primary over current protection device (distribution panel).

Higher-numbered categories correspond to electrical environments with greater momentary energy, so a measurement product designed for CAT III environments can endure greater momentary energy than one designed for CAT II. Using a measurement product in an environment designated with a higher-numbered category than that for which the product is rated could result in a severe accident, and must be carefully avoided.

Never use a CAT II measuring product in CAT III, or IV environments.

The measurement categories comply with the Overvoltage Categories of the IEC 60664 Standards.

Insulation Cap for Test Lead

Kaise conforms to IEC 61010-031 (safety standard for hand-held probes) by using test lead caps.

Required standards : Exposed metal part must be 4mm or shorter for CAT IV and III environments to prevent short-circuits from occurring.

No Cap attached

For CAT II environment

Cap attached

For CAT III and IV environments

CE Mark

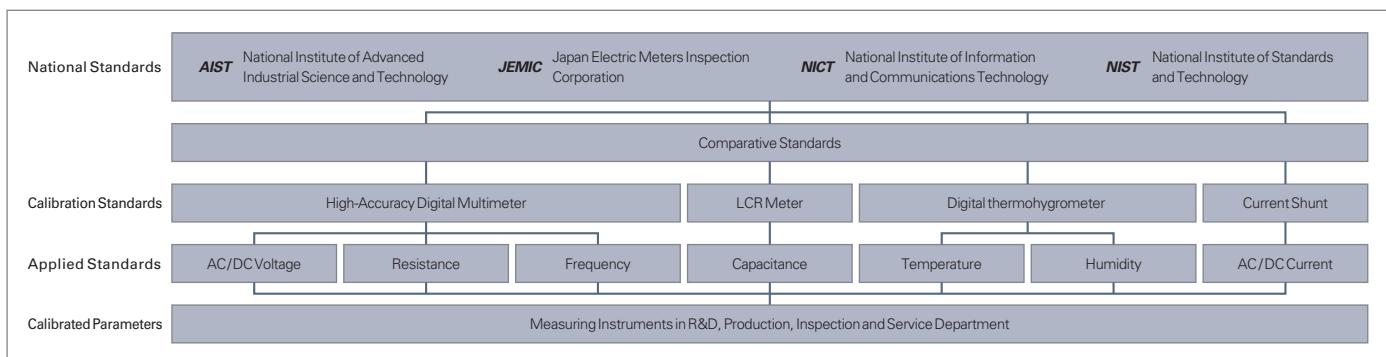

CE marking is a safety mark which can be attached only on a product meeting the safety requirements of the Directive of Council of the European Union (EC Directive).

A product attached with the CE mark is designed so as to meet the requirements of the "Low Voltage Directive" and "EMC Directive" of the EC Directive. Low Voltage Directive: This Directive covers products of power supply voltage of 50V-1000V(AC) and 75V-1500V(DC), and it defines electric safety requirements against shocks, burns, etc. The applicable standard is EN61010 corresponding to IEC1010 give on the left. EMC Directive: This Directive stipulates conditions so as not to give out strong electromagnetic waves from equipment to the outer environment and to protect equipment from the effect of electromagnetic waves from the outside.

Traceability Chart

Traceability to prove the compliance with national and international standards is an essential factor for measuring instruments used as test instruments associated with quality assurance. Products of Kaise are calibrated by reference samples which is periodically checked for its compliance with national standards. A calibration certificate and test data report are available on your request.

AC / DC Digital Clamp Meters

Handy-size Clamps with Efficient Functions

SK-7660 **TRUE RMS** / **SK-7661**

FEATURES

- 15 measurement functions in one small package.
- "Power-On Initialize" (auto zero adjustment) in DCA.
- Rubber-molded rotary switch and trigger.
- Easy-to-clamp compact & beaked clamp head even for narrow conductors.
- True RMS and peak hold (SK-7660), MAX/MIN (SK-7661)

SPECIFICATIONS

Display	: 4000 count LCD, Maximum reading 4050

AC / DC Digital Clamp Meters

Powerful for Every Measurement

SK-7708 TRUE RMS

FEATURES

- "Power-On Initialize" (auto zero adjustment) for DCA.
- Peak Hold, MAX / MIN measurements.
- Dust-proof case is used to protect the tester from dust damage.

Easy & Useful

Easy - to - Clamp

SK-7602's compact and beaked clamp heads assure easy clamping even for narrow conductors.

Avoid Your Fingers Slips

SK-7602 are always fit on your hand. Double-Molding Rubbers on a Function Switch and a Trigger avoid your fingers slips during operation.

Test Lead Holder

Fixable Test Lead on the side of SK-7602 by inserting its hook into the holder socket. Useful for Voltage, Resistance, Capacitance Measurements, Continuity and Diode Tests.

Advantages of SK-7820 / 7825

Vibration Alert Comparator

SK-7820 / 7825 incorporate Comparator Function in ~mA range. Buzzer sounds and vibrates if measuring value exceeds the setting value. Even in noisy surroundings, that can drown out the buzzer sound, vibration helps your comparator measurement. (Vibration alert is cancelable.)

Two-types-of Clamp Head

SK-7820's small clamp head assures easy clamping even for narrow conductors. SK-7825's large clamp head is suitable for thick conductors' measurement like 3-phase 3-wire system.
